

Alternative Surfaces for the solder flange-pin of the following products

SL-SMT 3.50
S2L-SMT 3.50
S2C-SMT 3.50

Dear ladies and gentlemen,

Hereby we inform you about a technical change in the plating of our solder flange-pin. This flange is used to increase the mechanical stability of the pin-header on the PCB.

Hence it gets only used under mechanical- and no electrical load.

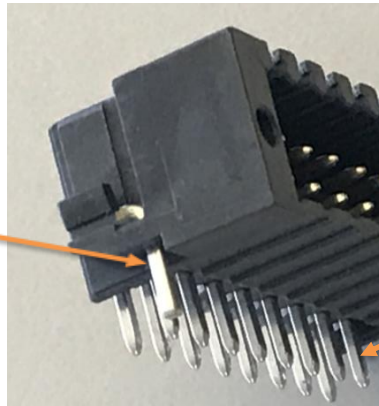

1. Initial situation

Due to the currently high demands of our product-versions with solder flange, we decided to deliver these pin headers both with matt-plated pins as well as shiny-plated pins to shortly increase our capacities.

In order to promptly reduce delivery times, the 6-month notification period will be reduced accordingly. As soon this measure is not needed anymore we will change back to the former status and inform you

2. Technical differences

solderflange pin
without electrical
functionality

solderpin (not
affected)

- This measure has no functional effects on these only mechanically used pins.
- All technical data still comply with the specifications of the standards and guidelines of the IEC 60664-1 and the IEC 61984.
- There is no change in the soldering-process needed.
- All article numbers used by customers with specifically in the QMA (Quality Management Agreement) defined surfaces, are excluded from this measure and accordingly not shown in the below article-listing.

3. Reason for change

Improvement of the current delivery situation.

4. Affected parts

SL-SMT 3.50 with solder flange
S2L-SMT 3.50 with solder flange
S2C-SMT 3.50 with solder flange

A list of affected articles number can be found below.

5. Data

The technical data is not affected by this measure.

Detailed data sheets are available in our online-catalogue.

Two-row pin-headers in pitch 3.50mm:
